If you'd rather read the info instead of download it, click the larger photo (w/ links to download if available) or click the title above it for a link to the page where it's posted. If you'd like to leave a message here, or if you need me to delete/re-post it somewhere else, then you can. Thanks. One more thing, Christine. I really appreciate you taking the time to do this for us. We aren't just any normal clients; our boys are special to us and it's great to get their special "kick start" help. Thank you. Here's some info on Jack's specific situation, if you're interested in reading it. (Can't say it was "eager" reading, can you?) Jack says: "All day, all night, I couldn't put this down. It is an absolute MUST have for anyone who has a problem with starting them up. It is an easy to use program, but I will say that there are times when you want to test the customer service department of your platform. (My ATI Radeon 9600 didn't like the setup that came with the program.) I bought the PDF manual that came with the program (you can't find it anymore) and it was very informative and easy to follow. It is real easy to create profiles and to play with the settings. (The max resolution the program supports is 1920x1440, but my graphics card is pretty good at that, too.) I do suggest using the auto installer if you have a ATI Radeon card. It worked like a charm for me. It did not install well with the onboard graphics. I am not a gamer so my computer is not used as a video card, but for those that are gamers, the graphics are not bad, and I can get all the settings to run at the highest resolution possible. My computer seems to run the game smoothly as well, which is also important. (I am running Windows XP Home SP3 with an Intel Core 2 Duo T5600, 4GB of memory, and a 80GB Seagate Barracuda 7200 RPM.)" I want to thank Christine Young for taking the time to look through this, and I'll post links to the instructions, where you can download the program, if I can find them again. Hopefully I can find them. (Been a few years since I've set up a gaming computer with these kinds of options.)
