Firewall question: If I run Supreme Commander 2 through Steam, does it run through a. If so, it will download an update to Supreme Commander 2 for me automatically.

Q: Can't login to MySQL using pyMySQL I am using python and pyMySQL as a tool for managing database. I have a config.ini file which contains: [MYSQL] host=localhost port=3306 user=root password= I have also set root password using: mysqladmin -u root -p password And I can't login to MySQL using: from pyMySQL import MySQLdb import config db = MySQLdb.connect(**config.cfg) The error I receive is: Traceback (most recent call last): File "/Library/Frameworks/Python.framework/Versions/2.7/lib/python2.7/site-packages/MySQLdb/cursors.py", line 208, in execute self.errorhandler(self, exc, value) File "/Library/Frameworks/Python.framework/Versions/2.7/lib/python2.7/site-packages/MySQLdb/connections.py", line 36, in defaulterrorhandler raise errorclass, errorvalue ProgrammingError: (1045, "Access denied for user 'root'@'localhost' (using password: YES)") I have tried using: db = MySQLdb.connect(**config.cfg,host=localhost,port=3306,user=root,password=password) I am following some tutorials where they don't have the "host" option in the config.ini file. Can anyone suggest what I have missed? Thanks

A: Is the mysql daemon running on localhost? If so, then you need to put in the IP address of your localhost. For example, if you are running on a Mac, you should put host=127.0.0.1 This means that the daemon runs on the same machine as your Python code. Try running the command: sudo mysqld --verbose and you'll see more details about what is going on. If you find the line where the daemon is listening, that will help you figure out the problem. If you don't know what the IP 2d92ce491b
