As a cloud service, Photoshop's integration with Facebook, as well as its mobile apps, lets you edit photos on the go, and also access and access other social media platforms that you sign up for. 1. Click the **Photoshop** icon on the Applications drop-down menu in the upper-right corner of your screen, or from the menu bar at the top of your screen, choose **Photoshop (Windows)** or **Adobe Photoshop CS6 (Mac)**. Photoshop opens and displays a Welcome screen. 2. Click **File** on the menu bar and choose **New** to open a dialog box that enables you to select a photo or other image file. At the bottom of the dialog box, there's a box that enables you to choose a file from your computer's file system. If you select that option, Photoshop will use that file as the basis for all your work, without opening an image in a separate window. If you choose a file in a separate window, a new tab opens in your browser window that displays the open image file. You can edit that image file at your leisure. 3. After you select a file and preview it in the image window to your left, you can drag the image out of the window and drop it on the Layers panel to the right to drag that image into Photoshop. 4. Photoshop offers five main areas of editing: the Image Editing window, Layers, Fill, Effects, and the History panel. You can drag any tool, such as the Brush tool (B) or Pencil tool (P), from the toolbar at the top of the screen to the Layers panel to create layers. 5. In the Layers panel to the right, you see a thumbnail of the image area that appears in the main image window. The image window shows you an actual representation of the image that's on your computer's hard drive. You see a small thumbnail at the bottom of the Layers panel that represents the image area that you're currently editing. That image area is called a canvas, which is a transparent canvas that you can fill with color and other elements. 6. When you click **Layer** on the menu bar, a drop-down box appears that lists all the layers that you currently have on your canvas. Each layer has a thumbnail that enables you to select or deselect layers. In the

Q: Give a specific order to a list of numbers In Python 3, I have a list of random numbers. The list is always a given length. What I want to do is to give a specific order to the numbers in the list. The output should be 0 1 2 3 4 5 6 7 8 9 instead of 0 8 2 1 3 7 5 9 5 4 6 I am trying to do it by iterating a given list of numbers. Code: with open("1.txt") as f: num = [int(i) for i in f.read().split()] #How many numbers in the list i = 0 while (i >> num = [0,1,2,3,4,5,6,7,8,9] >>> import random >>> random.shuffle(num) >>> print(num) [0, 1, 2, 3, 4, 5, 6, 7, 8, 9] >>> A: Check out the random module. With it, you can do: import random for i in range(10): print(random.sample(range(0, 10), i)) I used the range method with the count parameter to select just the specified number of elements. You can specify as many elements as you want: import random for i in range(2, 11): print(random.sample(range(0, i), i)) Over at Double Fine's blog the company has shown off their new logo. The double F is now just a simple, streamlined form. "I love it. It means more to me than all the other logos I've ever designed. I love it," Double Fine founder Tim Schafer told GamesIndustry.
