What's New in the ScreenSaver Works?

A screensaver with a creative and inspiring look ?The images in this screensaver are from various scenes at sunsets and sunrises, and the animated effects are specially made to create the stunning feeling of the sun starting to set on the horizon, the sun going down, and the lighting starting to change. ?In this screensaver, the contrast between night and day is realized by using the images from the night and the images from the day. ?A little trick is used by the author to imitate the sun setting on the horizon. With this technique, the images from the day make the sun sink towards the horizon, and the images from the night make the sun rise. ?The images have been modified to make them look like the sun is disappearing. With a rotation effect, the sun disappears completely in the images from the day. ?In some pictures, the sun is only partly visible. ?The images are saved in an organized folder and then processed by the program to be ready to be used in the screensaver. ? The file size is 150K so the time to start is not long. ? The total time to complete the screensaver is about 1 minute. ? The screensaver may run with any screen resolution of 32x32, 48x48, 128x128 and 256x256. ? There is no need to have a screen saver installed on your PC in order to run this screensaver. ? This screensaver is suitable for any windows users. ? Because the author did not like to have the program running in the background, the author decided to make this screensaver as a screensaver with no interactive prompt. ? The author is not associated with any commercial product. The author wants this screensaver to be free to everybody. ScreenSaver Features: ? Intuitive and easy to use interface with very simple, intuitive set of controls to create screensavers. ? Multiple folders can be used to add images to the presentation. ? Various display sequences are available. ? Preview of slideshow is available.

System Requirements For ScreenSaver Works:
