What's New In?

The program takes a folder of audio files and returns a list of songs ordered by artist, title and disc ID. It has a robust search and filter functionality. You can also convert the results into a TXT file. Features: The program includes well-designed and easy-to-use user interface. You can select a folder to be imported, optionally include subfolders and set the import format (e.g. "Title - Artist"). You can choose the import filter (e.g. files that contain a particular word in a field). You can also set song removal filters and configure how to display song IDs and versions. The program can be used in two modes. In standard mode, the program displays disc IDs and song titles. In advanced mode, the program displays disc IDs and versions. You can choose the view style (standard, black and white, custom color). The program allows you to configure the display layout. So, you can select the list preset (Song List, Artist, Disc ID), set the number of columns and display style (columns, leader rows, standard, black and white), modify the font size and more. You can view the song list in a list, which you can save in a TXT file. The program offers nine styles of lists that can be saved in a TXT file. You can configure the page display of the song list. The program has a well-designed help file. The program quickly returns a song list and doesn't require an update. The program doesn't require a restart. You can restore settings of the program (i.e. the layout, effects and page settings) to default. Notes: The program requires Windows 7/Vista/XP/2000/8/10 or higher and has been tested successfully on Windows 7 64bit (SP1), Windows Vista 64bit (SP1), Windows XP 64bit (SP3), Windows 7 32bit (SP1), Windows XP 32bit (SP3), Windows Vista 32bit (SP1) and Windows 2000 32bit (SP4).
