“The most famous product of its kind and one of the most powerful and widely used commercial CAD systems on the planet, Autodesk's AutoCAD has allowed Autodesk to remain a key player in the CAD industry for more than 30 years. We are honored to recognize AutoCAD as the #3 Most Innovative Product of the last 30 years,” said Debra Bainton, Autodesk vice president, global communications, during a teleconference with Computerworld. AutoCAD’s predecessor, the first version of AutoCAD was released in 1980 as a package of software tools for drawing and drafting. According to AutoCAD, its name is an abbreviation of the words "automated, coordinated and digital".

AutoCAD's roots trace back to an engineering program at the Massachusetts Institute of Technology (MIT) called "Graphical Interactive

Systems" (GIS). AutoCAD was developed to be a more user-friendly version of GIS, making it more accessible to the broader public. The two other Most Innovative Product winners selected by Computerworld were: Chalkbot is a mobile classroom chalkboard app that was made for teachers and students to "converse" about any topic and drawing and marking collaborative activities. Mentor: A Design System for Responsive Products, is a set of tools and APIs that allow developers to bring design language and brand guidelines into their products. The framework helps to ensure a consistent user experience and appearance across devices, apps and the web. "The Award is the most prestigious award given by Computerworld," said Marc Hecht, vice president of editorial, AutoCAD and Inventor, Autodesk. "It is a distinction we share with the award-winning developers, designers and technical innovators at AutoCAD. We applaud them for their innovative work." AutoCAD is used worldwide by engineers and other technical professionals for creating and editing 2D and 3D CAD drawings, including architectural, mechanical, electrical and civil engineering drawings. Additionally, the software is used for digital and physical design applications such as sculpture, model-making, and film, TV, video game, and product development, among others. AutoCAD is a key member of the Autodesk Design Suite, which also includes Inventor, Inventor Professional and AutoCAD LT. The annual Computerworld Most Innovative Product Awards celebrate software and hardware products released over the last three years that

Cloud-based products In 2013 Autodesk launched a number of cloud-based products, including Project Builder, Project Online, Project Nitro, and Revit online. User-extensible programming model Autodesk's growth as a dominant supplier of CAD software enabled them to be the first CAD software company to ship a programming model capable of user-extensible programming. This led to development of the first native programming language for the CAD industry, AutoLISP. In 2001, Autodesk released AutoLISP, which was based on ObjectARX, an open source C++ class library. Through AutoLISP, software developers create programs that run directly in CAD software. AutoLISP is capable of building full-featured AutoCAD extensions from programming functions to be used in AutoCAD. Since the launch of AutoLISP, Autodesk has been working to provide a robust and complete class library, which includes functionality for drawing, file I/O, image processing, and more. The AutoLISP class library provides a set of common classes which can be used to develop a large number of programs, such as AutoCAD, AutoCAD LT, and AutoCAD for Alias Free. AutoLISP is a general-purpose programming language and object oriented object-oriented programming language that was developed at Autodesk Labs in 2001. At the time of its release in the year 2002, it was an add-on to AutoCAD. In 2003, the AutoLISP language was integrated into AutoCAD as a "subset" (a portion) of the language. In 2005, it was announced that the AutoLISP language would become the default programming language in AutoCAD, and that a completely new programming language (not based on AutoLISP) would be released. However, this new programming language never materialized. Instead, the new programming language introduced was the successor of AutoLISP, namely the integrated Visual LISP

programming language. Visual LISP is based on Visual LISP, an extension to the C++ language that was originally released in 1998. Visual LISP was introduced in 2010, and is the foundation for the other CAD APIs (as mentioned above). Unlike the AutoLISP programming language, Visual LISP was developed by a separate team of programmers. The AutoCAD 2010 class library, AutoCAD 5b5f913d15
