Crack Features: Flying toasters with wings. Toaster's speed and count are adjustable. Toaster's wings can be moved, rotated and removed. Toaster's size, count and speed can be controlled. Toaster's wings can be hidden. A really interesting screensaver that I discovered a few days ago, serves as a reminder of the past times when we were still using Windows 95 and 98, and not some Windows variants that can be easily re-installed by mistake, costing us hundreds of dollars. The "Praying for Windows" screensaver (released earlier) developed by APPLX gives us a glimpse of the time when Microsoft

---

and Intel used to make Windows 95 and Windows 98 the best Windows versions of all time and at the same time made them impossible to uninstall. You can find out more about this screensaver by reading this article. The "Praying for Windows" screensaver can be found in the Screensaver category. It can be set as the screensaver of your choice by accessing the context menu (right-click) and then choosing the "Praying for Windows" option. Your first opportunity to play with is in the "Settings" section where you can set how many windows to be displayed in the panel. The number can be adjusted

---

to any value, while the screen will include various configurations of the window display, from 32 of them up to a neat situation in which the every window is clustered into one giant window. The screen refreshes automatically, making this screen saver very lightweight. You can not change the session duration. This screensaver is created with advanced techniques and can be used as a fun screensaver (as it was intended to be). If you like this screensaver, don't forget to rate it! ToasterClone  
Description: Praying for Windows -  
Windows 95/98 6a5afdab4c

"Flying toasters flying as fast as possible. Controls are: high/low speed, flash, toaster count. Toasters fly from the top-left corner of the screen. The average speed of the toasters can be set between 1-100." (2 votes, average: 5.00 out of 5) Finding the right screensaver can be a lot of fun and even more difficult. There are many options available but choosing the right one for your desktop can become really hard. In fact, some of the most popular ones are not really the best and the case is just the same with this screensaver. In the realm of fun

screensavers, ToasterClone comes packed with an interesting alternative. flying toasters. The tool can be installed by accessing the "Install" function in the context menu (ToasterClone can be tested before intallation). So, the app basically displays toasters with wings that enter the screen from the top-left corner and which have various levels of speed. In the "Settings" area which be opened from "Screen Saver Settings" or ToasterClone's context menu, you can change the toaster speed and count. Unfortunately, the screensaver does not include any other options. The simplistic app requires a very low

---

amount of CPU and system memory. Unfortunately, unlike other screensavers, ToasterClone does not include an audio track whose volume can be adjusted or muted from the "Settings" section. Also, you cannot change the toasters' direction, orientation or size. All in all, ToasterClone is certainly a fun solution when it comes to brightening your computer with a crazy screensaver. Its limited features make the app easy to use even by inexperienced individuals. However, we must keep in mind that ToasterClone has not been updated for a very long time. ToasterClone
