Advantages Disadvantages To be honest, 90% of the time when I go on YouTube, there's about 5 videos that are really intriguing to watch. Those are the ones that pop up on the home page, the ones that show up in a video search or in the suggested videos based on my recent likes. However, there are a few things that may be a little bit challenging when trying to navigate through a huge amount of data and seek out the best content on YouTube for you. The first thing that would come to mind is the YouTube Suggest feature that I've heard about previously. I don't like using this feature since there isn't a whole lot you can do with it besides watch a short video that will ultimately take you to another video that will probably have about 30-seconds at most (in my honest opinion), but in theory it can lead you to interesting content (if you don't give it too much thought, that is). The other challenge is navigating through the millions of video uploaded on YouTube by other users and having to wade through the posts and comments of the videos. In this post, I would like to suggest you a video search engine that works a little bit differently than the others because it allows you to find videos on the fly. The YouTube Trending Videos feature might just change the way you use YouTube. YouTube Trends gives you a very interesting and easy way to navigate through the YouTube channel. How? It allows you to check the most-watched videos on YouTube, the best trending videos in general (like the ones with the most likes), the best-performing videos, the best-performing channels, the best-performing playlists, the best-performing music videos, the best-performing live concerts, and the best-performing authors. It's really easy to use and you have the option to search by keyword, phrase, popularity, category, or by country, state, city, or by popularity within a country. Within those categories, you will find that the list can expand quite a lot, allowing you to dig deeper and search through more results. The Trending Videos section will provide you with the most watched videos in a selected country or the entire YouTube universe. If you click on the direct link for that particular video, you will be taken directly to that page where you can watch the entire video or simply view a thumbnail of it. The timeline will then show the date the video was uploaded and the comments 09e8f5149f

This is different from the way which we are traditionally taught. I have noticed that, generally we are not interested in observing things not in front of us, we are more interested in teaching others our language and experiences. I know people are not going to change their habits, but the passive knowledge that we can get from the traditional way is
