Consuming a WCF service
with multiple methods I
am trying to consume a
WCF service using Fiddler
and the response looks
like this:

SomeSubscriptionName
SomeSubscriptionID Some
MessageSubject Some

MessageBody false and
then, the response data
from the service looks
like this:

SomeSubscriptionName
SomeSub

. Add this to the Key of your. A 45-year-old man has been charged after police say a firearm was discharged at two Border Patrol agents in Clint, Texas. Zamariel Ramirez is charged with aggravated assault on a federal officer. The two Border Patrol agents, who

were not named, told KVUE-TV that Ramirez "pushed the button" on the gun when he fired it.

Authorities say a bullet hit the ground, a second missed, and neither agent was struck. One Border Patrol agent told KVUE-TV that he immediately ducked down and radioed

dispatch about the situation. The agents were not injured, and Ramirez was taken into custody following the incident, the station reported. The El Paso County Jail confirmed to KVUE that the jail received Ramirez from U.S. Customs and Border

Protection on Aug. 28.

MyFoxAustin.com. Homeland
Security Secretary John
Kelly said earlier this
month that the Border
Patrol has recently
experienced the "most
violence it has seen in a
long time." "We have a
systemic border security

challenge in terms of people coming across," he told CNN. NBC News has reached out to the U.S. Customs and Border Protection and the El Paso County Jail for additional details.Q: How to automate multiple requests of a single host with multiple headers?

Goal: I want to create a shell script that will automate the visit of a website and do multiple requests at once with different headers. What I've tried and failed at: As a first step I tried to identify the right api to use. But I haven't been able to find an api

that does multiple requests for me (Including the 'headers' I think). At the very least I want to do: I thought of using curl but since I don't have the required information on my server (Including the login page) I can't figure it out. A: is my

service. Headers I
received: Accept:
application/json Accept-
Language: en Accept-
Encoding: gzip, deflate
User-Agent: Mozilla/5.0
