What's New in the Jpg Image Optimizer Shrinker?

Jpg Image Optimizer / Shrinker is an efficient and intuitive piece of software whose main purpose resides in helping you downsize your picture folders, in the interest of saving up disk space and making them easier to transfer. No setup is required. You can work with the application as soon as you download and decompress the archive, as it does not require installation in order to function properly. As such, it saves you the time otherwise spent on setup operations, even enabling you to store and run it from a portable storage device, on all compatible systems, with just a double-click on its EXE. Reduce the disk space occupied by pictures on the fly. Jpg Image Optimizer / Shrinker is able to work with files in bulk, allowing you to load a whole directory of pictures and process them with a couple of keystrokes. However, bear in mind that the folder should only contain images, as otherwise the utility may encounter an error and shutdown. After defining the output folder, you can press the 'Start Optimize' button and watch as your files are gradually processed by the application. It should be noted that photos in formats other than JPG will automatically be converted to this extension. While the level of optimization is quite high, in some cases reducing the size of the files by half, Jpg Image Optimizer / Shrinker does not offer you the possibility of deciding how much you wish to sacrifice from their quality, the operation being performed entirely according to a default configuration. A handy photo shrinking tool. To conclude, Jpg Image Optimizer / Shrinker is a practical yet uncustomizable program which you can rely on for reducing the dimensions of your picture folders by as much as half, thus also limiting the amount of space they consume on your PC. Size of the file is not indicated and it is too large. The output folder is not defined. The output folder is not writable. The output folder contains other files. Create output folder. Could not find output folder. Could not write in output folder. Error while creating output folder. Could not create output folder. Could not delete output folder. Error while deleting output folder.
