History Autodesk's first work on CAD for personal computers came in 1975, when the firm's founder John Warnock began work on a modified version of a CAD program he had written for the Xerox Alto. The resulting program was named "Bill" (for Warnock and his son Bill, both of whom worked on the program), and would later become AutoCAD. Unlike other programs at the time, AutoCAD featured two-dimensional (2-D) planar and 3-D CAD design, as well as input from a variety of input devices. First released in December 1982, AutoCAD was a modification of a previous program called "Bill" (for Warnock and his son Bill, both of whom worked on the program), which first appeared in 1974 and was written in assembly language. The prototype program was developed on a desktop PC with an internal graphics adapter and a mouse, but the product was soon moved from the lab to the office, where its use grew to encompass entire architectural design departments. Eventually the first fully functional AutoCAD version was released in 1983, with that release heralding the start of the CAD revolution. Unlike other programs at the time, AutoCAD featured two-dimensional (2-D) planar and 3-D CAD design, as well as input from a variety of input devices. In 1992, Autodesk released AutoCAD LT, a free, simplified version of the original AutoCAD. It included fewer design features, was only 2-D CAD, and lacked some of the higher-level functions found in AutoCAD. AutoCAD for mobile devices, also called "Mobile AutoCAD", was released in 1999. It is compatible with Windows, OS X, and Linux operating systems. In the late 1990s, Autodesk released AutoCAD for the Palm operating system, which was discontinued in 2011. In 2002, the Mac OS version of AutoCAD was renamed to "AutoCAD 2003" and became the first AutoCAD application to become available in Apple's App Store.

Collaborative Design and Data Exchange (CDDE) is an extensible content-sharing system for CAD applications. It is a supported feature in AutoCAD Activation Code Release 2013, 2012, 2011, 2010, 2009, 2008, 2007, 2006, and 2003. AutoCAD 2010 and 2011 introduce a new software update mechanism that allows companies to distribute an update to their entire user base through the Autodesk Exchange Apps store instead of waiting for a service release. An AutoCAD cloud service called CloudDraft allows individuals and organizations to store, display, and share their data and collaborate online. This service allows Autodesk users to share their AutoCAD drawings online in a secure, cloud-based service that uses the most up-to-date version of AutoCAD. CloudDraft is intended for use by AutoCAD engineers, architects, and other design professionals. Standard AutoCAD interoperability AutoCAD 2018 supports over 500 drawing data formats, including AutoCAD's native DXF format. AutoCAD uses an XML-based schema for drawing data export. AutoCAD uses an XML-based schema for drawing data import. AutoCAD supports binary file import from other CAD applications. Custom plug-in Prior to the introduction of plugins in AutoCAD 2011, AutoCAD's extensibility was limited. It could only be programmed in the Visual LISP language, which limited its usage to only AutoCAD-specific functionality. With the introduction of plugins in AutoCAD 2011, extensibility is now a supported feature. The AutoCAD Architecture extension (available on AutoCAD 2013) provides a language that is used to define, manage and run user-developed plugins. This feature uses the ACADArchitecture API. AutoCAD native The AutoCAD Native Extension for Exchange is an AutoCAD plugin that allows users to connect to existing online AutoCAD accounts and view and download CAD drawings from a user's personal cloud. The tool is designed for AutoCAD users, who wish to interact with a cloud-based account that is different than the AutoCAD license file. This extension also enables online access to DWG files. The extension is available in the AutoCAD application store, and AutoCAD 2011 or later is required to use the extension. As with any extension to AutoCAD, the AutoCAD Native Extension for Exchange is a user-level tool. Like other user- 5b5f913d15

The first is a person's name. The second is a list of events they have attended. The last time the event was attended is stored in the mysql table in the "attended" column. What I want to do is list all the unique persons so that the person only appears once. So I want to have a list of all the unique people based on the name and the attend_id column. A: This is the query you're looking for: select person_name from your_table group by person_name having count(*) = 1; The "having count(*) = 1" is there to ensure only distinct records are returned. Note that this also requires that you have the right indexes in place on person_name and attend_id columns, with the fact that the regulation only required the study to be held "without a majority of the Commission's members in attendance." 65 Fed. Reg. 2129, 2129. That text differs markedly from the text here: the former required the study to be "performed without a majority of the Commission members present," but the latter states that the study must be "performed without a majority of the Commission's members in attendance."
