1. Create a new drawing. 2. Insert the map using the commands below: 2.1 Load the map as a separate layer 2.2 Specify the layer you want to use (In my case, I want to use the Autocad map). 3. Select the map layer and right click -> Flip Selected (so you can see both sides of the map) 3.1 Select the layer you want to use from the select drop-down menu. 3.2 Select the view you want to see (in my case, I want to see my drawing on both sides of the map). 3.3 Click OK. You can also right click on the map layer, choose "Flip Selected" and select "Swap Selected" (or similar). 4. Use the commands below to navigate to other parts of the map. 4.1 Move the map layer in the 3D viewport with the commands below: 4.1.1 Select the map layer and hit the right arrow 4.1.2 Select the viewport and hit the right arrow 4.1.3 Select the navigation tool (the box with the arrows) and hit the right arrow To create a drawing from a specific map layer Import the map as a separate layer and then start creating the drawing. Note that you cannot change the view of the map during the import as it will be imported in the "paper space" mode, which will not be linked to the 3D viewport. You can however, rotate the map during the import to get a better view, as the map is imported as a separate layer with it's own origin. If you need to link a map layer to the 3D viewport use the "Map Match" command. Note: The previous example will always leave the map layer in the "paper space" and use the "Autocad" paper space as the layer origin (for example when you use right mouse click to "Flip Selected" on a 3D viewport you will have the 3D viewport on top of the map). However you can choose the viewport to use as the origin of the map (In my case, I want to use the Autocad viewport). Select the map layer and right click -> Map Match. This will export the map in the 3D viewport view mode and the
