Bob Dold, R-Ill., is raising money for Democrats. The longtime Illinois congressman has endorsed Rep. Tammy Duckworth, D-Ill., in the primary for the Democratic nomination to challenge Republican Sen. Mark Kirk, a top GOP target in the 2014 midterm elections. "I am encouraging my constituents to support Tammy Duckworth in the primary and [Rep.] Robin Kelly in the general. I think Tammy Duckworth is a real fighter, and I think Robin Kelly will go far in the general," Dold told The Huffington Post. Duckworth, who lost both of her legs while serving as an Army nurse in Iraq, is seeking to become the first service member and the first woman nominated for the Senate by a major political party. She's been endorsed by such Democratic luminaries as Sens. Dick Durbin, D-Ill., and Chris Dodd, D-Conn., and New York City Mayor Michael Bloomberg.

What's New In?

There was a whole family of PictureViewers which had different size and quality versions. The software, which was created in the year 2004 by Paul Wobst is no longer available. This program allows you to choose between nearly any image format available on the Internet. The images can be opened and viewed in the program. NEW! includes VB.NET translator utility. Program does not work on a Windows 7 operating system. The program can delete folders. Legal notice: There are different sizes of the PictureViewer, as this program includes two sizes of VB.NET. The comparison of all versions of the program in different languages follows later in this license note. I agree to the terms and conditions of use of this software and to the processing of my personal data. License notes (VB.NET users): Please download the whole VB.NET Source code of the program. Save it on a diskette or CD or download it with an FTP Client. Or copy it to a server. Because the program has about 70 MB and the whole VB.NET project adds up to 1,4 GB. Program should be installed on a Windows XP system. Or the file should be downloaded for Windows XP and later versions. It can be used in either 32 bit or 64 bit mode. The version of the program I have of the VB.NET program for pictures only works in Windows XP and later. It works differently in Windows Vista and later because the old installer does not work on those operating systems. The installer must be used from Windows XP which is working fine for me. I will release a later installer for Windows Vista and later soon. The old version of PictureViewer is still available on the website of the developer. It is not the same as this version. But it works at least with 98 and 2000. WinXP: If you have problems while installing the program, use the "repair tool", which can be found in the "Programs and Features" menu. The program needs a Windows Vista installation CD for installation. The program can be installed using "dism" or "Setup.exe". The installer can be found in the download section on the website. The program can be used in a 32 bit or a 64 bit installation. Windows XP: The program has to be installed on a machine with at least 5
