* Vectors: The Photoshop program uses shapes, lines, and text as well as grids and rulers. A vector is a graphic element that you can create in Illustrator or Photoshop. If a vector-based graphic is made pixel-based, it is called a **raster graphic***. An example of a raster image is a photograph. * Rasters: This means a raster image can be made pixel-based (a picture made up of dots). So for example, a photograph can be made into a raster image, using Adobe Photoshop. A raster image is more flexible than a vector graphic, and offers a lot of flexibility. * Gradients: Gradients are the most common way to create an image's color that changes from one point to another on an image. They are typically used to add or subtract a color from an image. * Layers: Layers are the heart of Photoshop, and this is where you manipulate an image. Layers can be combined for additional steps to create more sophisticated work. You can edit a single pixel (like cropping the left and right sides of an image), the whole image, or image or text placed inside a box, to name a few. * Brightness/Contrast: Adjust the brightness and contrast of an image for better clarity and understanding. * Lighting: Adjust the lighting effects of an image to alter the mood of an image. * Shadows: Shadows can be added to an image. Shadows can be used to change the mood of an image. * Eyedrops: Eyedrops can be used to change the color and intensity of an image. * Adjustment Layers: Adjustment Layers are used to modify an image. An Adjustment Layer can be changed later. * Shadows and Highlights: Shadows are created with a Cut or Copy command. They can be turned on or off. * HSL (Hue, Saturation, and Lightness): HSL can make an image darker, brighter, or the colors less intense. * Squares: Squares can be used to crop the image. They can be turned on or off. * Freeform: Photoshop's Freeform feature lets you free-form create shapes for editing. * Corrections: Corrections can be used to make pictures, such as eye color, align text, resize, crop, and repair.

Basic Editing Photoshop Elements is simple to get started with. Unlike other image editing programs such as Corel Paint Shop Pro and Adobe Photoshop, Photoshop Elements does not require any download. Everything that you need to edit, crop, enhance or create a new image is instantly available in the program and you do not need to download anything. You can drag-and-drop your original files into the program and edit them on-screen without waiting for a download to finish. 1. Crop Your Images You can crop the area of an image that you want to work on, either by the default rectangular crop or by a square crop. The default setting is a rectangular crop but in this instance you can choose a square crop by simply clicking on the corner or the square corner when choosing Crop (see images below). Be sure to show the mask of the object you are cropping. This shows the chosen area of the image in black and white and makes it easier to crop the image properly. When cropping your images, sometimes it's easy to get fooled into cropping things on the edges of the image. To prevent this, click on the Crop Tool when it is highlighted and the Tool options menu will appear. Select Crop on the Tool options menu and you will be presented with a menu of presets for different crops, including a square crop. A 9-slice crop is the default setting, so this is the one you should always use when cropping your images. When you crop your images, it is easy to accidentally crop more than you wanted and have to start over. To prevent this from happening, use the Edit in Front function. This copies the active image layer into the front so the image will not be overwritten if you make an error. To show the layer on the image, double-click on the layer to bring up the Layer Style dialog box. To copy the layer, click on the Edit in Front icon in the Layer Style dialog box and your image will be cropped as before. 2. Add a Layer Style Adding a Layer Style changes the overall look of the layer, making it much easier to create effects such as grunge, pattern, vignette or embossing. As before, you can click the New Layer Style icon on the top-left of the Layers palette to create your Layer Style. You can then adjust 05a79cecff

Patients with diabetes have an increased risk of lower limb amputation, yet there is no standard approach to the prevention of amputation. That is, there are few data on how specific steps in the process of assessing a foot injury translate into changes in preventive behaviors and future risk of amputation. A dynamic model of behavior (COM-B) framework has been proposed to predict clinical behavior. This framework proposes that behavior can be further broken down into three factors: capability, opportunity, and motivation. By focusing on these three factors, the proposed model makes a number of assumptions and predictions regarding the preventive behaviors that may be beneficial in reducing the risk of amputation. Specifically, the potential positive behavioral effects of lower extremity amputation prevention are 1) that patients and their providers will be able to use devices or other technology for monitoring pain or other signs of acute ankle injury, 2) that patients will use medications and/or other devices to prevent further injury, and 3) that patients and providers will use devices and information to take preventive actions related to diabetes and lower limb amputation. An understanding of the determinants of these behaviors is limited. The proposed research will address these gaps by testing the efficacy of an intervention to increase patient capability, opportunity, and motivation to use protective devices and take preventive actions. A new mHealth intervention will be tested for its efficacy to improve the capability, opportunity, and motivation of patients to use protective devices and take preventive actions as potential approaches to decreasing the risk of lower extremity amputation. Capability will be measured through the use of an accelerometer and smartwatch to count the number of steps taken and the daily time spent sitting or standing. Opportunity will be measured with a series of questions regarding the self-efficacy associated with using protective devices and taking preventive actions. Motivation will be measured through a survey about expected barriers to use protective devices and take preventive actions. These items will be used to determine whether the patients have appropriate motivation to adopt the suggested preventive behaviors. It is hypothesized that the patients using the intervention will have a larger increase in the number of steps and decrease in the time spent sitting and standing compared to the control group. It is also hypothesized that self-efficacy and social support will mediate the relationship between the proposed intervention and the behavior, such that for patients with increased social support and self-efficacy, there will be a greater increase in the number of steps taken and decrease in the time spent sitting or standing. The overall goal of this research is to test the hypothesis that the use of an

Welcome to the first book review for the 2018 year. I've been looking forward to getting back into the swing of things because I really got behind with my reading the last couple of years. I read a lot of books this year. Here are the book I read in 2017. Flat Stanley by Jeff Brown The book itself was really interesting and I feel like I learnt a lot. Before I moved in with Boyfriend I was meant to read a book a month for a year and I decided to change it up a little bit and read a book a week. That first book was Flat Stanley. I really enjoyed this book and some of the advice in it was really useful. When I moved in with Boyfriend I was definitely feeling stressed. This book was a great way to unwind from that. I would highly recommend this book to anyone who likes books, is looking for books for a new year's resolution or needs a great book to take back to work for a team activity! The Girl's Guide to Surviving a Night of Two by Rini Nagle This was a really good book and the tips on how to survive a night with Boyfriend were really useful. I think this will be something I will be recommending to my friends. I particularly enjoyed the tips on how to make the night romantic. I'm also reading this right now and want to get through it as soon as possible. A Place Called Home by Emily McKay I knew this book was going to be good when she was talking about her friend at a party who told her, "This is the best book you've ever written". The book is set in Liverpool, where the author is from and the characters are very relatable. I also read a few of her other books and they are really enjoyable. The Crossing by Gabby Sidley I've read several books by Gabby Sidley and this is the most instagram-famous of them all. The Crossing definitely lives up to it's title and is a great thriller. The books are fast paced and have a really gripping ending. I enjoyed the differences between the different characters as well as learning the background of the plot. I was especially interested to learn about the hero's work history as that is something I personally struggle with. My boyfriend introduced me to Gabby Sidley
