The next-generation motion-capture system combines data from across the pitch and is powered by 4K cameras, gyroscope technology, AI algorithms and a new fan-inspired artificial intelligence system. The camera system will be improved to capture a wider field of view and deliver sharper images, while the new AI system will focus on recognizing physical movements like acceleration, braking, attacking and defending. It will also allow the algorithms to more accurately predict player movements and tackle opportunities. Players will also see their skills ranked based on their physical and mental skills, instead of just relying on their previous performance. FIFA 19 introduced Pro-Controller, where users were able to choose between the Revolution, Touch, and the classic sticks. FIFA 22 will bring Pro-Controller to other platforms as well, including Xbox One, Switch, PC, Mobile (PS4, XB1, and PSVita) and Oculus Quest with Touch controllers. It also introduced "The Journey" mode, which allowed the users to learn the new game through play time. The mode would progress as they scored, improved their performance and earned better players. This mode will be the only way to unlock cards, special players and player packs. FIFA 22 will also introduce a new collectible card experience called FIFA Ultimate Team. The "My FIFA" card collection is available to be unlocked through PlayStation Store and Xbox Live. The cards include different card styles, from unique player cards to legendary player cards. There will also be a new card trading experience that will give users the chance to trade cards with other players in their friends' collections and help them progress through the collectible card experience. FIFA 22 will be available on Xbox One, PlayStation 4, Nintendo Switch, PC, iOS and Android phones and tablets with a release date of September 27.

Some games can't because of its high use of memory. With so many brands in one game (PS3,360,Wii U),there is only so much memory that can be used.There are some brands that have little affect on the game being played in live mode.There is no difference if you are watching in 1080p or 720p.You won't be able to play and just stand and watch.I've noticed that in real life almost all of us know this, if you were watching TV and were given the option of switching between channels to play games/watch sports/shows, would you leave the TV on that channel, or would you usually switch to another channel to play the game. You would not stand there and watch TV playing a game, you would change the channel. You can find more 24/7Sports in
